SUMMARY

Systems and Computer Engineer building software, automation, and AI solutions that solve real business problems. I build apps and workflows on Microsoft Power Platform and Google Workspace, RPA automations with Python, AI agents connected to APIs and external tools (MCP, OpenAI API, n8n), and full-stack web platforms with React, TypeScript, Django, and SQL. I understand the business process first, then decide whether it is best solved with low-code, custom code, or AI.

PROFESSIONAL EXPERIENCE

Process Excellence Analyst II — Teleperformance

May 2025 – Present

- Designed and built a Power Apps application to plan and track sprint-based projects (products, tasks, and hours per user) on Dataverse, SQL, and Power Automate flows; used by about 50 people across two areas.
- Built a Python alerting system that queries SQL Server, generates per-client charts and Excel reports (pandas, matplotlib), and delivers them by email and Microsoft Teams to clients in several countries.
- Migrated recipient management for those alerts from Power Apps to Google Apps Script and Google Sheets, centralizing client email lists by country and syncing them with SQL Server.
- Automated operational processes with Power Automate and Python RPA, integrating Dataverse, SQL, and Microsoft Teams: 50+ flows in production and 200+ hours of manual work saved.

Technology Architecture & Innovation Intern — Banco de la República de Colombia

Jul 2024 – Dec 2024

- Developed and maintained applications with Python and Microsoft 365 (Power Apps, Power BI, Power Automate) to automate internal processes.
- Updated enterprise architecture indicators and diagrams used in the bank's technology planning.
- Supported strategic technology architecture and innovation initiatives.

SELECTED PROJECTS

- ClinReport AI** (*Django REST Framework, React, TypeScript, OpenAI API*). Platform for clinics and psychology practices that drafts reports with AI for the professional to review, with encryption of sensitive data and per-clinic data isolation.
- MyContabilidadApp** (*React, TypeScript, Supabase, Recharts, Vercel*). Personal finance manager with dashboards, real-time KPIs, and savings goals.
- AppControlHorarios** (*JavaScript, Vite, Supabase, PostgreSQL*). Work-hours tracker that calculates net worked time in real time, with employee and admin dashboards.
- Navega Seguro interoperability layer** (*Node.js, REST API*). API that retrieves, normalizes, and exposes maritime and oceanographic data on the Colombian coasts as JSON.

TECHNICAL SKILLS

AI & agents: OpenAI API, MCP, n8n, Claude Code, Codex

Automation & low-code: Power Apps, Power Automate, Power BI, Dataverse, Python RPA, Google Apps Script, Google Sheets, Microsoft 365

Development: Python, TypeScript, JavaScript, React, Next.js, Node.js, Django, Tailwind CSS, HTML, CSS

Data & cloud: SQL, SQL Server, PostgreSQL, pandas, matplotlib, Supabase, Azure, Vercel

Other: Java, Kotlin, C++, Git, GitHub, Figma

EDUCATION

B.S. in Systems and Computer Engineering — Universidad Católica de Colombia

2020 – 2025

CERTIFICATIONS

- AI Without Limits (IA sin Límites) — AWS Entrena LATAM (2026)
- Six Sigma Yellow Belt — Teleperformance (2026)
- Web Development Bootcamp — Udemy (2026)
- AI Tools for Developers — Platzi (2025)
- Generative AI with ChatGPT, Azure, and Midjourney — Udemy, 2 courses (2024)

In progress: Machine Learning and Data Science with Python; Django: Build Robust Web Applications with Python (Udemy)
